

## **Reckoning with Digital Projects: MITH Makes a Roadmap**

Discussion published by Dominique Daniel on Wednesday, November 7, 2018

Stephanie Sapienza writes about sustainability of digital projects:

"In February of 2018, MITH spent dedicated time talking about sustainability of digital projects with a team from the University of Pittsburgh's Visual Media Workshop (VMW) as part of a focused user testing session for The Socio-Technical Sustainability Roadmap... The final goal of that project was to create a digital sustainability roadmap for developers and curators of digital projects to follow. The work was initially based on what the project team discovered during its NEH-funded project, "Sustaining MedArt." In this blog post, which is a late entry in MITH's [Digital Stewardship Series](#) from 2016, I'm going to talk a bit about what I discovered during the process of using the roadmap for one of MITH's projects, how I synthesized our discoveries in the form of a concrete tool for MITH to utilize the roadmap afterward, and how this has changed some of my conceptions about digital sustainability practices.
