

## **For Authors & Publishers**

Page published by Yelena Kalinsky on Monday, October 23, 2017

### **How do I get my material reviewed on H-Net?**

H-Net graciously accepts new scholarly works for review consideration. Unless other arrangements have been made, please send books to:

H-Net Reviews  
Old Horticulture, Suite 141H  
506 East Circle Drive  
East Lansing, MI 48824-1115

### **Who decides what is reviewed?**

H-Net's review editors are notified of a book's availability, and if the editors deem it appropriate for their network, they find qualified reviewers. To get a sense of the types of works that are reviewed and which networks have been most active, browse [recently published reviews](#) or visit [individual networks](#) in your field of interest.

### **What kinds of materials get reviewed?**

For the most part, H-Net subscribers are interested in monographs, textbooks, reference and teaching materials. Our scope is as wide as our list of [discussion networks](#). We often suggest that publishers browse [recent reviews](#) or use the reviews [search function](#) to find reviews on particular topics. Searching by list, for example, will tell you which lists have been most actively reviewing, and perhaps give you a feel for the types of material they prefer.

### **Can multiple networks review the same book?**

Yes, different networks may request to review the same title for H-Net Reviews. Please keep in mind that each network has its own list of subscribers, so having a book reviewed on multiple networks will attract the attention of different readers. Furthermore, reviewers on different networks may emphasize different disciplinary issues and perspectives, so multiple reviews on H-Net will often illuminate different sides of a book's argument.

### **How can I get in touch with an individual review editor?**

To find review editors on an individual network, please visit the network's Staff listing. Click on any editor's User profile and follow the Contact link in the right-hand menu to send them a message. To write to a network's editorial board, please visit the network front page and follow the Write the editors link in the network menu.

### **Do any networks specifically review textbooks?**

No networks currently focus their reviews on textbooks, although [H-Teach](#) reviews books related to

teaching history and from time to time other lists have commissioned reviews on teaching materials.

**Will I receive a copy of published reviews of my company's books?**

Yes, our staff sends out notices to publishers within four weeks of their review appearing on H-Net Reviews. To update your contact information in our publisher database, please notify us at [revhelp@mail.h-net.org](mailto:revhelp@mail.h-net.org). We also tweet published reviews via [@HNet\\_Reviews](https://twitter.com/HNet_Reviews).

**Who should I contact if I have a question about a book I submitted for review?**

You should contact our clerks at [revhelp@mail.h-net.org](mailto:revhelp@mail.h-net.org).

**What are your circulation numbers?**

The combined sum of all the H-Net network subscriptions exceeds 100,000. In any given week the H-Net web pages are visited a total of over 200,000 times. The reviews archive steadily receives more than 5000 visits per week; 10,000-plus hits in a week is not unusual.

**Who are your subscribers?**

Our discussion lists began as a consortium of topical discussion lists for history professors, and to this day professors and professional scholars form an important subscriber core. More recently however, H-Net has found an audience among graduate students, librarians, independent scholars, high school teachers, and the educated lay public. You can browse our editors and subscribers in the [People Directory](#).

**Where can I announce recent titles?**

The [H-Net Book Channel](#) is H-Net's book announcement service. Individuals can [submit their new titles](#), while publishers can email new catalogs using the [our sample spreadsheet](#) to [bookchannel@mail.h-net.org](mailto:bookchannel@mail.h-net.org).
