

[Will Your Research Need to Be Retracted?](#)

Discussion published by Avi Staiman on Saturday, January 8, 2022

With journal submissions on a steep rise since the outset of the Covid-19 pandemic, publishers are feeling intense pressure to manage the record level of article submissions, while continuing to preserve their high standards. At the same time, they must ensure this research is disseminated quickly so that it can reach the hands of decision-makers so they can determine policy.

But what happens when - in the midst of this rush - published research is later discovered to be inaccurate and at times, outright fraudulent? And what can you do to ensure that your research doesn't risk retraction?

You are invited to join us for an in-depth conversation with **Ivan Oransky, Co-Founder of Retraction Watch**, to hear about the surprising prevalence of research that requires retraction and the not-so-simple process of doing so.
